Novità Produttive

PAIL è da sempre attenta nella scelta di materiali e metodi di lavorazione innovativi e a basso impatto ambientale e abbiamo fatto del rispetto del territorio, dell'ambiente e delle persone che lo vivono un asset fondamentale della nostra filosofia e dei nostri processi produttivi.

Per quanto riguarda le porte laccate due sono le importanti novità produttive:

- NUOVO supporto in HDF per porte Pantografate
- Vernice all'acqua BIO

Nuovo Supporto in HDF porte Pantografate

+ compatto
+ pesante
+ resistente
= aumento della qualità della finitura e + vicini all'ambiente

Verniciatura BIO

Abbiamo scelto per le nostre lavorazioni una verniciatura prodotta con materie prime di origine vegetale, provenienti da fonti sostenibili.

Le vernici all'acqua sono prodotte con materie prime rinnovabili atossiche ed ecologiche. composte principalmente da acqua e bio-resina di natura acrilica, con un ridottissimo contenuto di composti organici volatili, inquinanti per l'atmosfera e dannosi per la salute dell'uomo.

Caratteristiche che contribuiranno a portare innovazione non solo in termini di sostenibilità ambientale, ma anche in termini di proprietà tecniche ed estetiche del prodotto finale:
maggiore resistenza chimica e alla luce e maggiore potere antingiallente.

Il Ciclo di Verniciatura

Il ciclo di verniciatura delle porte laccate prevede:

6 passaggi in linea per ogni anta, **4 di Fondo** e **2 di Finitura**

FONDO: Fondo bianco a spruzzo UV all'acqua, applicazione 440 gr a mq tramite macchina spruzzatrice automatica oscillante

FINITURA: Finitura UV all'acqua, applicazione 130 gr a mq tramite macchina spruzzatrice automatica oscillante

Tutte le fasi sono intervallate da una levigatura manuale ed automatica accurata della superficie
